PRACTICAL JOURNAL

Class: SYIT(NEP)

Sem: IV

Roll No.: SYIT46

Date : 21/11/2024

Course Name: Advanced Web Programming

Page no:

Practical Number: 01

Q.1) Find the factorial of a number obtained through user input.

Code:

Default.aspx.cs

```
using System;
using System.Collections.Generic;
using System.Linq;
using System.Web;
using System.Web.UI;
using System.Web.UI.WebControls;

namespace WebApplication1
{
    public partial class _Default : Page
    {
        protected void Page_Load(object sender, EventArgs e)
        {
        }

        protected void txtnum_TextChanged(object sender, EventArgs e)
        {
            Int64 n, fact = 1;
            n = Int64.Parse(txtnum.Text);
            for (Int64 i = 1; i <= n; i++)
            {
                fact *= i;
            }
            lblResult.Text = "the factorial of " + n + "is" + fact.ToString();
        }
    }
}
```

Default.aspx

```
<%@ Page Title="Home Page" Language="C#" MasterPageFile="~/Site.Master" AutoEventWireup="true"
CodeBehind="Default.aspx.cs" Inherits="WebApplication1._Default" %>

<asp:Content ID="BodyContent" ContentPlaceHolderID="MainContent" runat="server">

    <asp:TextBox runat="server">SYIT46</asp:TextBox><br /><br />
```

Q.1) Create a program that demonstrates AdRotator.

Steps to Use AdRotator in a Web Application -

Open Visual Studio - Open Visual Studio and create a new project.

Create a New Project - Create a new project by selecting "(link unavailable) Web Application" under the "C#" section.

Add a New XML File - Go to Solution Explorer, right-click on the project, select "Add" > "New Item" > "XML File", and click "Add".

Download and Add Images - Download three images and save them in an appropriate folder. Then, go to Solution
